CHEMISTRY

The Chemistry Department at new Paltz offers many advantages to the student interested in majoring in this field. It provides a strong background in general, organic, physical and analytical chemistry, and offers a variety of courses not generally available at other four-year colleges. New Paltz upper division undergraduates are able to enroll in advanced courses in biochemistry, materials science and instrumentation. High quality modern equipment is used for instruction and research in student laboratories. The small size of upper division courses encourages close interaction between faculty and students. In addition, the chemistry faculty sponsors student research.

Two undergraduate programs leading to Chemistry are available. There is an *American Chemical Society* (ACS) approved major and a general chemistry major.

One-half of the credits in the major must be completed at New Paltz.
